

## AIR POLLUTION CONTROL *INSTALLATIONS*

In the new economic reality sales may not come from the usual sources. A new capability associated with APC offers services above and beyond those that you have come to expect from the APC group.

### A NEW OPPORTUNITY!

We have established the **APCI** group. What does the “**I**” stands for? It is not one thing but indicates the many ways that AAF International can add value for our clients.

We can provide “Air Pollution Control **Installations**”, providing “**Intelligent**” and “**Imaginative**” Solutions, using technical “**Initiatives**” based on AAF “**Ingenuity**” and “**Integrity**”. This business will “**Involve**” AAF and its highly trained and experienced representatives and will be built on the “**Interdependent**” relationship that we have developed over the years.

Add value to your APC equipment offering by providing complete AAF solutions to air cleaning problems. This will include a full range of services ranging from technical services, through installation and start-up assistance, to full turn-key installations.

### TECHNICAL SERVICES:

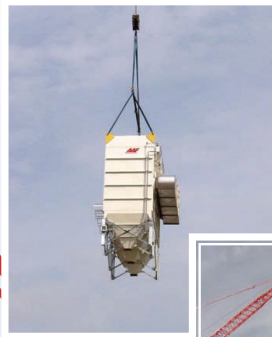

- Site and equipment surveys
- Application review and analysis
- Testing
- Engineering and design services including full system design
- Project management
- Installation supervision
- Equipment start-up

### INSTALLATIONS:

- Full turn-key installation of AAF products.
- New equipment
- Equipment upgrades and refurbishment
- AAF guaranteed solutions for air cleaning problems.

All standard products included and much more:

- Millennium and Design M FabriPulse bag houses,
- OptiFlo cartridge collectors, and
- RotoClone wet collectors
- Side access and front access standard air filter systems
- Control systems
- Purchased components

## CUSTOM APPLICATIONS:

We are also looking for those unusual applications that may require a novel use of AAF's products or a combination of AAF's and other products in a complete air cleaning package. Over the years we have developed products for specialty market niches such as:

- Ventilation Filtration Systems for encapsulating biological threats, such as anthrax spores, for the United States Postal Service
- High efficiency air cleaning systems for security applications such as embassies, safe rooms, and other high value target protection
- Indoor firing range air cleaning systems
- Inlet air cleaning for fine bubble diffusers in waste water treatment plants.
- Waste transfer station ventilation systems

## EXPLOSIVE DUSTS APPLICATIONS:

A number of high profile industrial accidents have resulted in increased awareness of the hazards associated with explosive dusts and the realization that many existing systems are inadequate. OSHA has issued alerts and is in the process of focusing on explosion prevention. This includes closing down sub-standard dust control systems.

Help your clients by offering AAF's expertise and experience to provide the following services:

- Inspection, review and analysis of existing installations
- Evaluation of explosive dust hazard
- Recommendations for correcting deficient systems
- Existing equipment upgrades, remediation, or replacement to comply with current regulations
- Installation of new protective equipment to comply with current regulations
- Final report and system certification
